

PHOENIX RELIEF

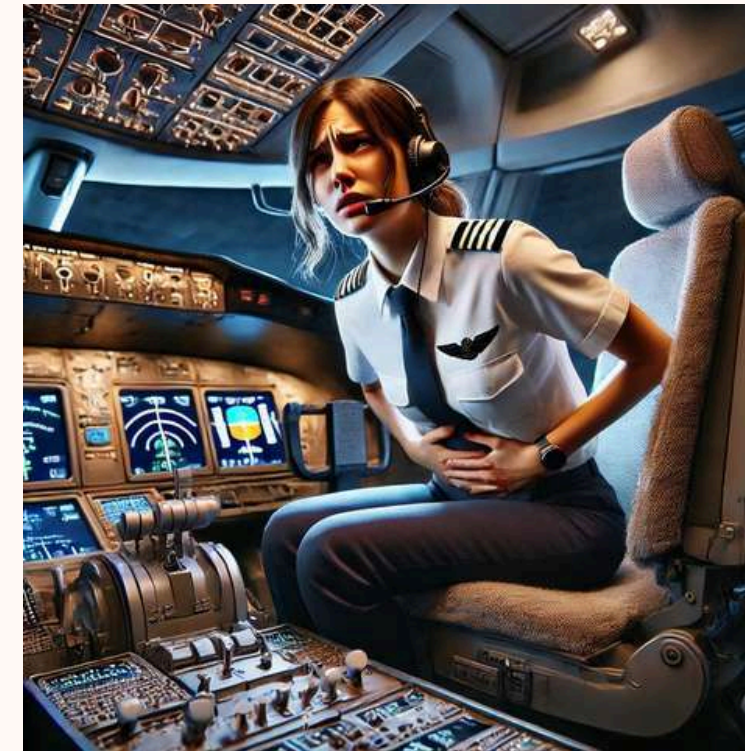

**Aviatrix Relief:
Integrated Menstrual Pad-Diaper
Hybrid for Dual Fluid Management in
Women**

Problem Definition and Requirement

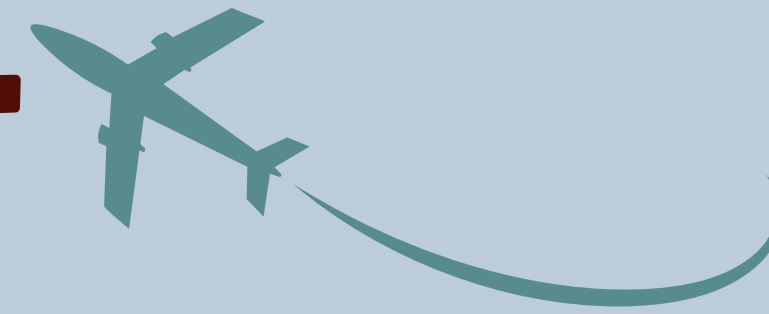

- There is a lack of an integrated hygiene product specifically designed to manage both menstrual and urinary fluids without compromising on absorption capacity, comfort, skin health, or user mobility.
- Existing products fail to provide a unified solution that is discreet, ergonomic, and capable of maintaining dryness and hygiene over extended periods.

- Regularly holding urine can weaken bladder muscles, increase the risk of urinary tract infections (UTIs), and potentially lead to bladder stretching, making it difficult to empty normally
- Urine can't be controlled when women are diagnosed with the problem in the pudendal nerve, like pudendal neuralgia, which can occur due to various factors including trauma, surgery, childbirth, prolonged pressure from activities like cycling, or even conditions like diabetes and tumors, leading to nerve compression or damage.

OVERVIEW OF PRODUCT

- **Antibacterial & Skin Protection:** Prevents infections and rashes. Material: Non-woven fabric infused with silver ions and aloe vera gel.
- **Dual Absorption System:** Suitable for both urine and menstrual flow. Material: Organic cotton or bamboo fiber sheet + cellulose-based ADL.
- **Eco-Friendly Option:** Use of natural fibers (bamboo/cotton) in ADL. Material: Fluff pulp (cellulose) and Super Absorbent Polymer (SAP) (e.g., Sodium Polyacrylate)
- **Leak-Proof Yet Breathable:** Ensures dryness without trapping heat. Material: Polyethylene film + microporous membrane.
- **Smart Monitoring:** A color-changing wetness strip adds convenience. Material: Polypropylene + elastane.

OUTLINE OF THE PRODUCT

This Product is fully biodegradable

5 layers of Active Protection

INNER COMPONENT DETAILS

Soft & Stretchy Fastening System:

For optimized comfort and fit, with ingredients such as polyethylene, polypropylene, and elastane.

Top sheet (contact layer):

Contains Silver ions and aloe vera gel infusion. Purpose: Antibacterial (silver ions) Skin-soothing and anti-rash (aloe vera)

1

Acquisition and distribution layer (ADL):

Organic cotton or bamboo fiber top sheets with a cellulose-based ADL

2

Anti-leak Barriers :

Prevent the leakage around the legs. Made with polypropylene and elastane, soft and stretchy ingredients helping diaper follow free movements

4

Absorbent core:

Cellulose and Super Absorbent Polymer + Sodium Polyacrylate crystal (turns liquid into gel)

3

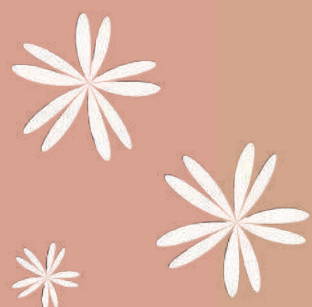

Backstreet:

Polyethylene + microporous film Purpose: Prevents liquid from leaking and Allows some airflow

5

Wetness Indicator:

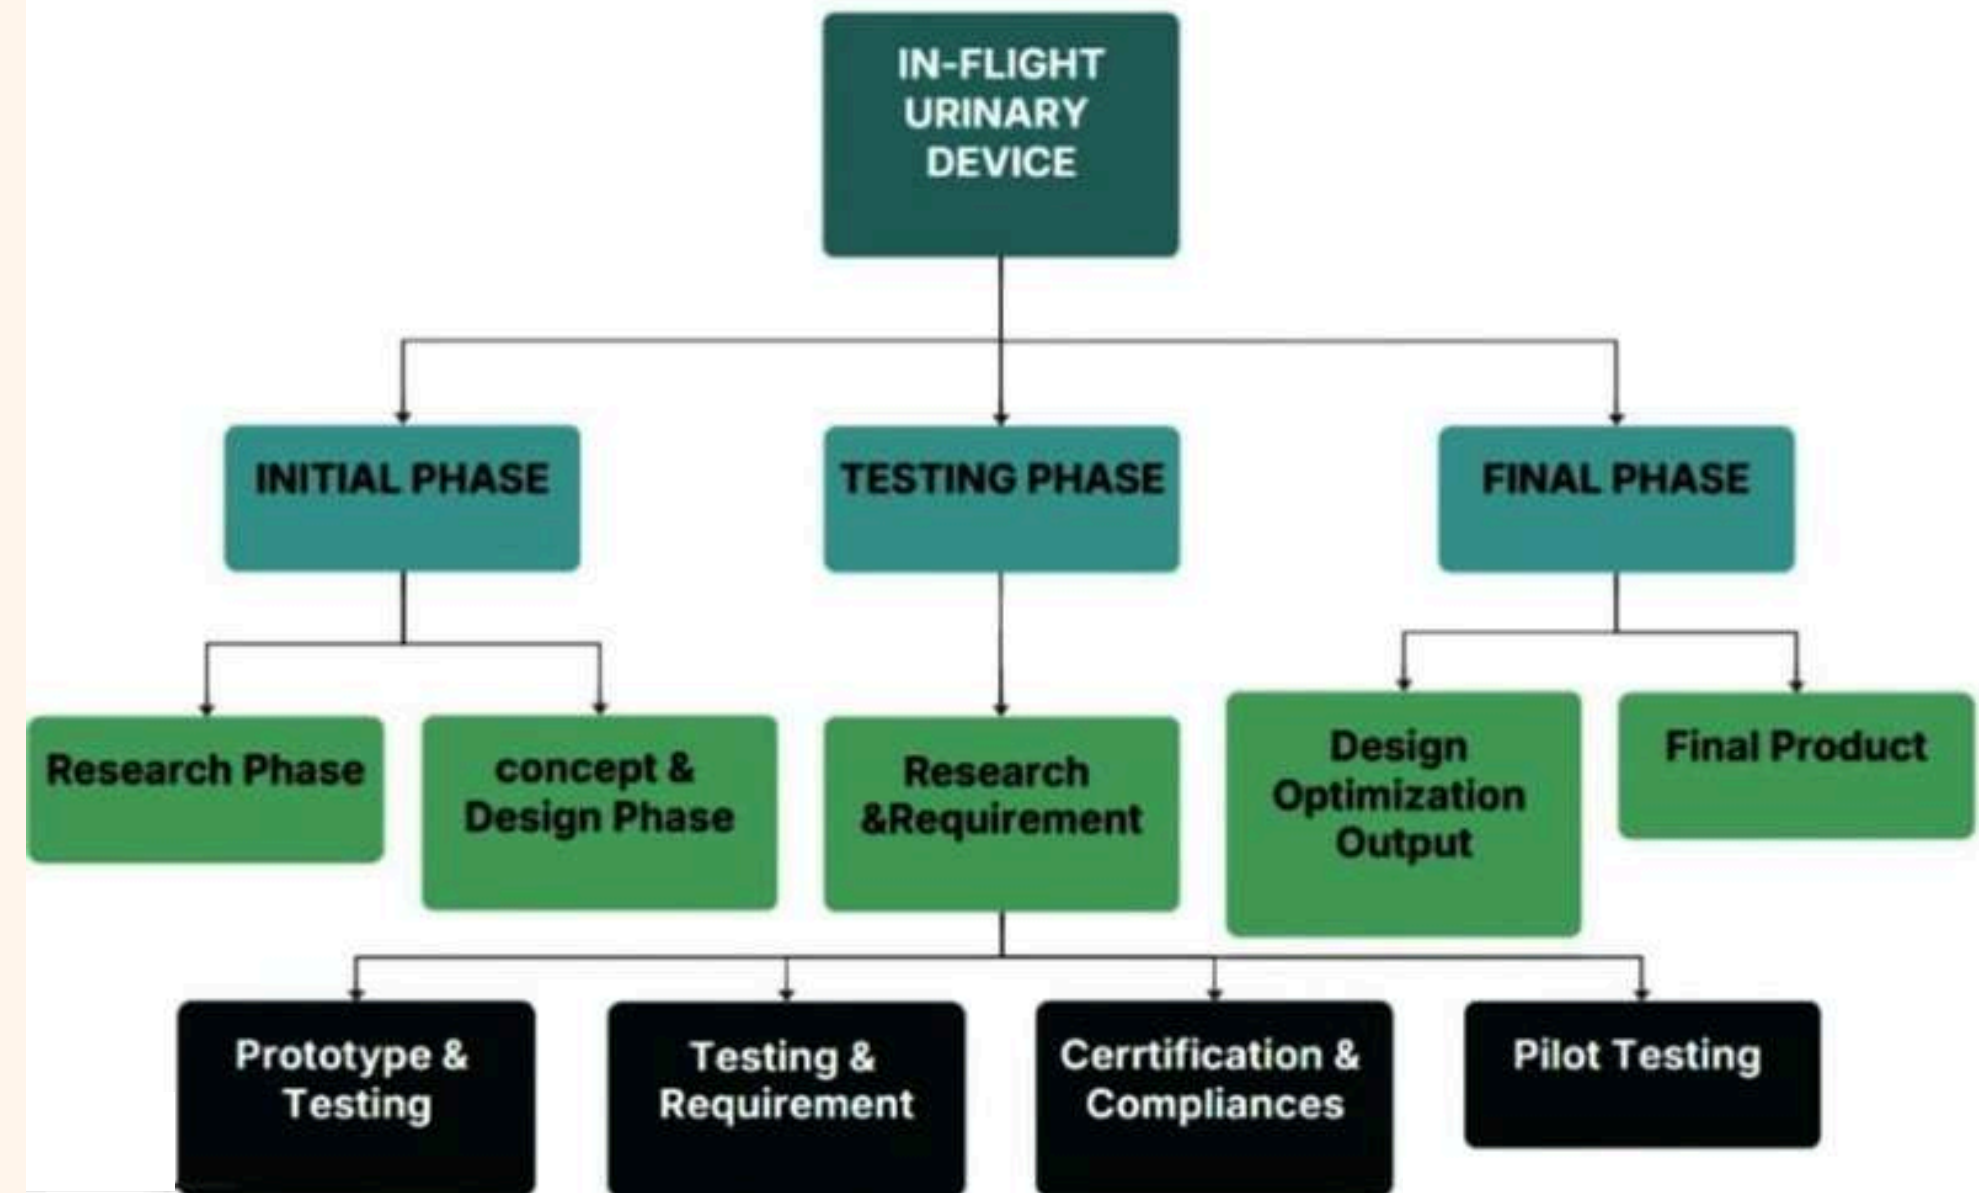

A color-changing strip alerts the caregiver when the diaper is wet.

Technology Readiness Level (TRL)

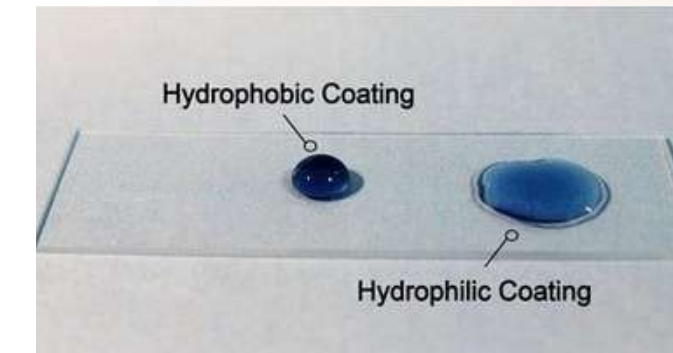

9	Product ready for induction
8	Production Design validated in Field/End-User Trials and verified for QA/Standards
7	Prototype validated in Field/End-User Trials
6	Prototype demonstrated in target platform after system integration
5	Prototype validated for for system integration to target platform
4	Functional prototype for lab validation
3	PoC to demonstrate functions of critical subsystems /modules
2	Product concept formulated
1	Basic scientific principles

Flow Diagram

MVP CONCEPT

1. Top Sheet (Silver Ions + Aloe Vera)

This layer touches the skin, so it must be safe, soothing, and hygienic. Impact: Prevents irritation, promotes comfort, and kills odor-causing bacteria.

2. Absorbent Core (Cellulose + SAP + Sodium Polyacrylate)

This is the heart of your product — responsible for absorbing and locking away large volumes of both urine and menstrual fluid. Impact: Ensures dryness, prevents leakage, and supports long-term wear.

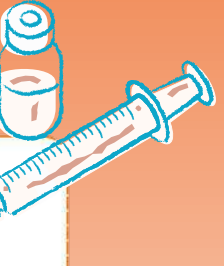

3. Wetness Indicator

Why it's crucial: Adds user-friendliness and health value by signaling when it's time to change. Impact: Helps avoid rashes, infections, and improves convenience for users of all ages.

Budget Summary

Certification Compliance

Total Product Development Budget ₹ 50,70,000 (approx)

Product Development Budget (Provisional)			Component	Component Cost
a	Prime Costs	₹ 25,00,000	Development of Prototype	₹25,00,000
b	Primary Overheads	₹19,65,000	Certification Compliance	₹20,35,000
c	Secondary Overheads	₹6,05,000	- Logistics and distribution - Administrative	₹5,35,000
Total		₹50,70,000		

REVENUE

SEGMENT	DESCRIPTION	MRP(Per Unit)	PACK OF 5	REASON
Standard Retail	B2C single-use product	₹65	300	Affordable for working women & travelers
Bulk Healthcare	Hospitals & care homes	₹50	240	Discounted for large volume
Defense/Govt	Special use (field kits)	₹55	270	Custom packaging & approvals included
CSR/NGO Support	Rural women, low-income	₹35 (subsidized)	160	Through CSR/govt. subsidy schemes

Fund Ask

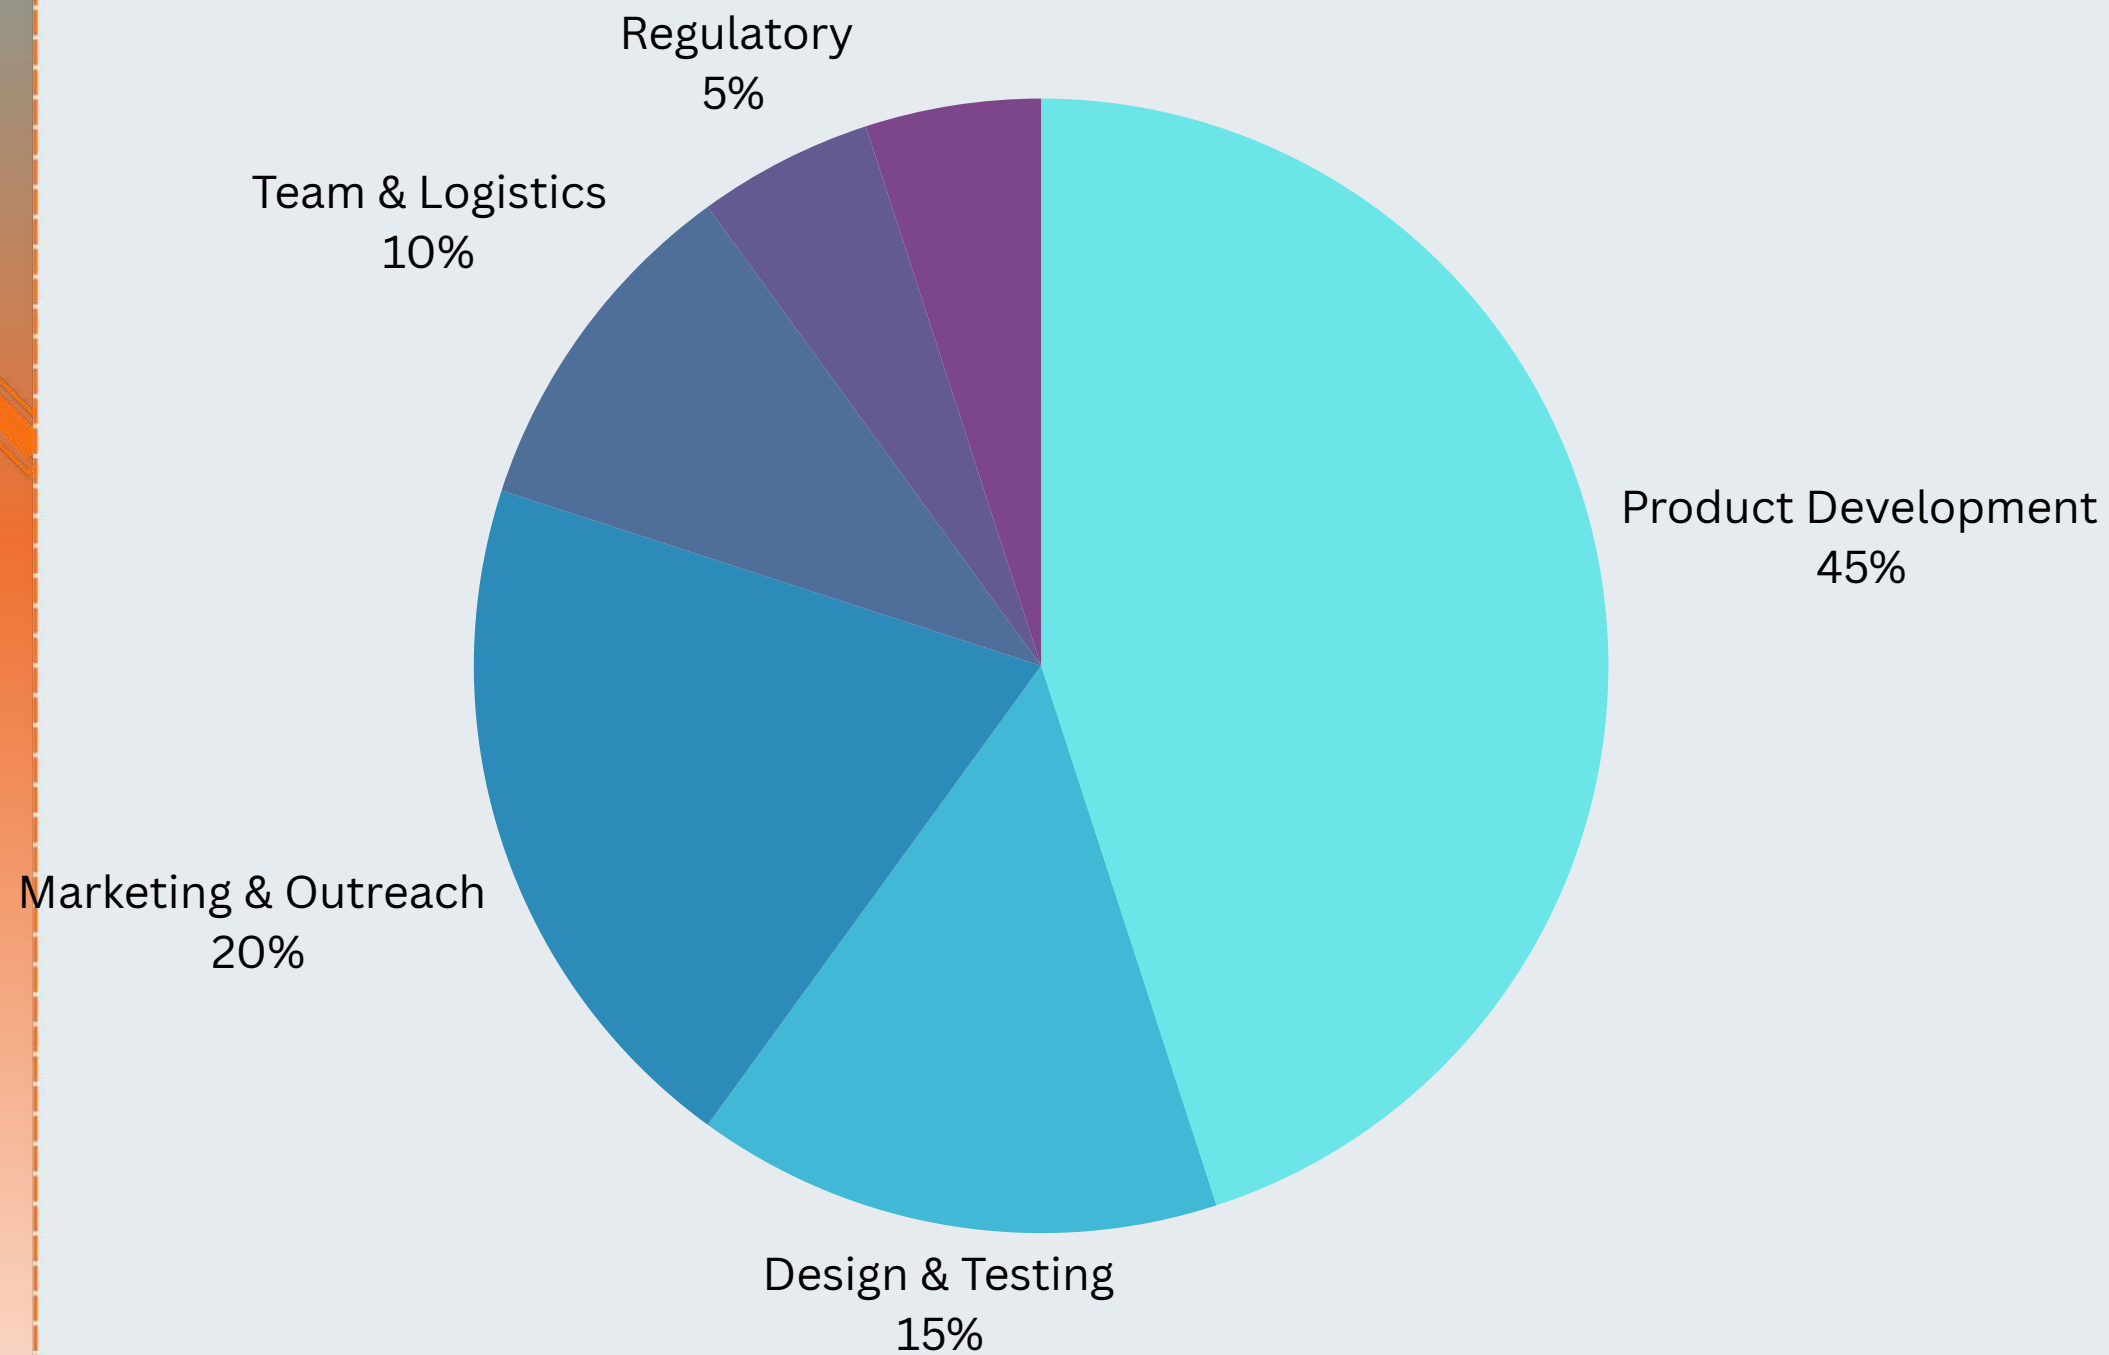

Activity	Allocation (INR)	% of Total	Description
Product Development	₹6,75,000	45%	Material procurement (SAP, cellulose, silver ions, packaging), one-time use pad-diaper prototyping
Design & Testing	₹2,25,000	15%	3D CAD, absorbency tests, safety evaluation
Marketing & Outreach	₹3,00,000	20%	Branding, digital posters, 2-minute explainer video, printing awareness material
Team & Logistics	₹1,50,000	10%	Basic stipends, transport, mentor interactions
Regulatory/Legal Prep	₹75,000	5%	Consultations for IP/utility patent and health compliance
Contingency Reserve	₹75,000	5%	Emergency material failure, re-testing buffer

We currently seek **₹15 Lakhs** MSME grant to cover prototyping, testing, and early marketing. The full development and market scale-up plan requires **₹50.7 Lakhs**, to be raised in later stages

Fund Utilization

FUND UTILIZATION	
ACTIVITY	DESCRIPTION
Product Development	Material procurement (SAP, cellulose, silver ions, packaging), one-time use
Design & Testing	3D CAD, absorbency tests, safety evaluation
Marketing	Branding, digital posters, 2-minute explainer video, printing awareness material
Team & Logistics	Basic stipends, transport, mentor interactions
